Sequence 3799, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GEI
TITLE OF INVENTION: WITH HUMAN DISEASE, METH,
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 60/237,768
                                                                                                                                                                                               RESULT 4
US-09-949-016-3799
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                           913

Sequence 3, Application US/09264737A

Patent No. 6107549

GENERAL INFORMATION:
APPLICANT: Feng, Paul C.C.
APPLICANT: Reng, Paul C.C.
APPLICANT: Ruff, Thomas G.
TITLE OF INVENTION: Engineering Plant Resistance to Pyridines via
TITLE OF INVENTION: Expression of Esterase Enzymes
FILE REFERENCE: 38-21(10551) RLE3 Pyridine Tolerance
CURRENT APPLICATION NUMBER: US/09/264,737A
CURRENT FILING DATE: 1999-03-09
EARLIER APPLICATION NUMBER: 60/077,377
EARLIER APPLICATION NUMBER: 60/077,377
NUMBER OF SEQ ID NOS: 11
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 3
LENGTH: 1701

Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF
FILLE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT APPLICATION NUMBER: 60/241,755
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR PILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03

The present nucleotide sequence, the coding region of which is also CC claimed, is that of cDNA encoding human 53010, a novel member of the CC carboxylesterase family. The invention provides 53010 nucleic acids, CC antisense molecules, expression vectors, host cells, transgenic animals, CC 33010 proteins, fusion proteins, antigenic peptides, anti-53010 CC antibodies and methods for detecting the presence of 53010 polypeptides or nucleic acids and polypeptides can act as novel diagnostic and CC polypeptide, and of modulating the activity of the polypeptide. The 53010 CC nucleic acids and polypeptides can act as novel diagnostic and CC therapeutic agents for controlling disorders involving aberrant or CC deficient hydrolysis of carboxylic esters. As 53010 mRNA is highly CC expression is regulated in some rodent pain models, 53010 molecules can also act as novel diagnostic targets and therapeutic agents for controlling neurological disorders, such as pain-related disorders. A CC claimed method of treating or preventing a disorder (especially a pain-created disorder) characterised by aberrant activity of a 53010 cc activity or expression. 53010 nucleic acids are also useful in chromosome CC expressing cell involves administering a compound that modulates 53010 cc arrays, for detection of variations or mutations, as surrogate markers and in bharmacocennomics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a unrological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological disorder; and (3) a method for treating a subject having a urological disorder. The compound has uropathic and cytostatic activities. The polypeptides related to urological disorder are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence encodes a human urological disorder related protein, which is used in the exemplification of the present
